

# Eco Warranty:2008

## Environmental Management Standard

In today's competitive market place, customers, the community, and regulatory bodies are increasingly demanding that organisations demonstrate a commitment to the environment, the prevention of pollution, and the promotion of environmental sustainability. To meet these requirements, more organisations are choosing to have their environmental management systems certified to demonstrate their commitment to care of the environment.

**Eco Warranty** is a management system standard that has been designed with businesses like yours in mind. It is an extremely user friendly environmental management standard that when used correctly will maximise your environmental performance.

When it comes to choosing the perfect environmental management standard for the certification of your organisation, what you really need is a user friendly value adding management system standard.....and with **Eco Warranty** that's exactly what you get!

The **Eco Warranty** standard, like all the other Warranty Standards, has been broken down into nine critical elements which keep it easy to use and understand.

The critical elements in **Eco Warranty** are:

- Commitment to Care of the Environment
- Environmental Review
- Environmental Hazard Assessment
- Environmental Planning
- Environmental Control & Monitoring
- Continuous Improvement
- Training, Awareness and Competence
- Document Control & Control of Records
- System Verification

**Eco Warranty** has many advantages over other environmental management standards. Some of these are:

- The logo can be used on your products.
- The standard is extremely user friendly.
- The standard can be downloaded for free.
- The standard is self explanatory.
- The registration fees are cost effective.
- The standard outlines what the auditor will expect to see during the on-site assessment.
